

THE CITY OF
SAN DIEGO

Sewer and Water Group 774

Background

The City of San Diego (City) has established an ongoing program that mandates the replacement of all aging and deteriorating existing concrete sewer mains and existing cast iron water mains currently in service within the City. These replacements will eliminate future sewer main stoppages, sewer spills and water main breakages. In addition, it will also bring the existing sewer and water mains up to current City standards by upgrading these mains to polyvinyl chloride (PVC) and to a minimum diameter of eight (8) inches.

Project Overview

Sewer and Water Group 774 is located in the City Heights and Kensington-Talmadge communities.

This project calls for the replacement of pipes within the general area between Monroe Avenue, 48th Street, University Avenue, and 42nd Street, which includes both residential and commercial lane uses.

The work done for this project is mostly within paved public right-of-way. Pipe installation will be accomplished by open trench construction. The limits of construction will be a 10-foot wide area through the center of the streets and alleys. Within streets, these limits will allow one travel lane to be maintained. A travel lane will not be possible around the construction zones within alleys and temporary traffic rerouting and notices to residents will be required.

Schedule

The project is scheduled to begin construction at the end of summer 2011 and estimated to complete in the winter of 2013.

Cost

The construction cost is approximately \$3.7 million.
